Title :	Standard Test Method for Sulfur in Petroleum Products by Hydrogenolysis and Rateometric Colorimetry		
Scope :	This test method covers the determination of sulfur in petroleum products in the range from 0.02 to 10.00 mg/kg. This test method may be extended to higher concentration by dilution. This test method is applicable to liquids whose boiling points are between 30 and 371°C (86 and 700°F). Materials that can be analyzed include naphtha, kerosine, alcohol, steam condensate, various distillates, jet fuel, benzene, and toluene. The values stated in SI units are to be regarded as standard. The values given in parentheses are for information only. This standard does not purport to address all of the safety concerns, if any, associated with its use. Title :	Standard Test Method for Vapor Pressure of Gasoline and Gasoline-Oxygenate Blends (Dry Method)		
Scope :	This test method covers and is applicable to gasolines and gasoline-oxygenate blends with a vapor pressure range from 35 to 100 kPa (5 to 15 psi). This test method, a modification of Test Method D323 (Reid Method), provides two procedures to determine the vapor pressure of gasoline and gasoline-oxygenate blends. NOTE 1—Because the external atmospheric pressure is counteracted by the atmospheric pressure initially present in the air chamber, this vapor pressure is an absolute pressure at 37.8°C (100°F) in kilopascals. This vapor pressure differs from the true vapor pressure of the sample due to some small vaporization of the sample and air in the confined space. NOTE 2—Vapor pressure of gasoline or gasoline-oxygenate blends below 35 kPa (5 psi) or greater than 100 kPa (15 psi) can be determined with this test method. For materials with a vapor pressure greater than 100 kPa (15 psi), use a 0 to 200 kPa (0 to 30 psi) gauge as specified in the annex of D323. Some gasoline-oxygenate blends may show a haze when cooled to 0 to 1°C. The values stated in SI units are to be regarded as standard. The values given in parentheses are for information only. This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.

Title : Standard Test Method for Analysis of Methyl Tert-Butyl Ether (MTBE) by Gas Chromatography
Scope : This test method covers the determination of the purity of methyl tert-butyl ether (MTBE) by gas chromatography. It also provides a procedure to measure impurities in MTBE such as C4 to C12 olefins, methyl, isopropyl and tert-butyl alcohols, methyl sec-butyl and methyl tert-amyl ethers, acetone, and methyl ethyl ketone. Impurities are determined to a minimum concentration of 0.02 mass %. This test method is not applicable to the determination of MTBE in gasoline. Water cannot be determined by this test method and must be measured by a procedure such as D1364. This test method is inappropriate for impurities that boil at temperatures higher than 180°C or for impurities that cause poor or no response in a flame ionization detector, such as water. The values stated in SI (metric) units of measurement are preferred and used throughout the standard. This standard does not purport to address all of the safety concerns, if any, associated with its use.
