Λευκωσία, 17 Φεβρουαρίου 2015

ΠΡΟΣ: Όλα τα Μέλη
ΘΕΜΑ: Member of the National Committee 1025/2012

Κυρία/Κύριε,

Σας επισυνάπτουμε γνωστοποιήσεις από Εθνικούς Οργανισμούς Τυποποίησης, μελών των Ευρωπαϊκών Οργανισμών Τυποποίησης CEN/CENELEC, που περιέχουν τους τίτλους προτεινόμενων εθνικών προτύπων.

Σύμφωνα με την Ευρωπαϊκή Οδηγία που αφορά την πληροφόρηση σε θέματα τεχνικών προτύπων, μπορείτε, αφού μελετήσετε τους τίτλους: α) να ζητήσετε όπως λάβετε ηλεκτρονικά ολόκληρο το κείμενο του προσχεδίου εθνικού προτύπου, εάν αυτό είναι διαθέσιμο, β) να συμμετάσχετε στις συναντήσεις της τεχνικής επιτροπής του Εθνικού Οργανισμού Τυποποίησης που ετοιμάζει το προσχέδιο προτύπου και γ) να υποβάλετε εισήγηση στον CYS, να αρχίσει τυποποιητική εργασία σε Ευρωπαϊκό επίπεδο σχετικά με το θέμα της γνωστοποίησης, εάν φυσικά πιστεύετε ότι το εν λόγω εθνικό πρότυπο θα επηρεάσει την ελεύθερη διακίνηση προϊόντων ή την κυπριακή βιομηχανία και οικονομία.

Τυχόν σχόλια και παρατηρήσεις παρακαλώ όπως υποβάλλονται στον Κυπριακό Οργανισμό Τυποποίησης. Σε περίπτωση που δεν υπάρξει οποιαδήποτε ανταπόκριση, ο CYS δε θα φέρει ένσταση στην προώθηση των υπό αναφορά εθνικών προτύπων.

Για περισσότερες πληροφορίες μπορείτε να επικοινωνείτε με την κα. Μαριλένα Νικολάου, Λειτουργό Διοίκησης και Διεθνών Σχέσεων του Κυπριακού Οργανισμού Τυποποίησης (CYS), τηλ: 22 411439, Φαξ. 22 411511 και στην ηλεκτρονική διεύθυνση: m.nicolaou@cys.org.cy

Με εκτίμηση,

Ανδρέας Ανδρέου,
Αναπλ. Διευθυντής Τμήματος Βιομηχανίας.
για Γενικό Γραμματέα.

Title : Eurocode 7: Geotechnical design - Part 1: General rules
Scope : This amendment of UNE-EN 1997-1 includes the national annex of the mentioned standard for its implementation in Spain. It establishes the Nationally Determined Parameters, decision on the application of informative annexes in European standard and non-contradictory complementary information.

National Ref :
Title : Mix design for structural lightweight aggregate concrete
Scope : This standard summarizes the present state of technology, presents and interprets the data on lightweight-aggregate concrete from many laboratory studies and the accumulated experience resulting from its successful use, and reviews performance of structural lightweight aggregate concrete in service. This standard includes a definition of lightweight-aggregate concrete for structural purposes and discusses, in a condensed fashion, the production methods for and inherent properties of structural lightweight aggregates.

National Ref :
Title : Concrete - Test methods for mixer performance
Scope : This standard specifies the test methods for mixer performance. The mixer performance test is used to check the ability of a mixer to mix concrete that will be within prescribed limits of variability. The uniformity of fresh concrete is evaluated by comparing variations in quantity of coarse aggregate and unit weight of air-free mortar of two samples, one taken at the front and one at the back of the mixer or from the first and last portions of the batch as discharged from the mixer. The test is applicable to all types and sizes of mixers.

Title : Windows and doors - Performance characteristics - Internal pedestrian doorsets without resistance to fire and/or smoke leakage characteristics

Scope : This European Standard identifies material independent performance characteristics that are applicable to internal pedestrian doorsets without resistance to fire and/or smoke leakage characteristics. This document applies to doorsets intended to be used internally for construction works: - in escape routes not subject to fire and/or smoke leakage; - for specific uses with specific requirements; - for communication only. NOTE 1 These above intended uses can be combined, for example escape routes with specific requirements. Products covered by this European standard are power operated hinged or manually operated internal pedestrian doorsets and screens with flush or paneled leaves, single or double leaf, which could be completed with: - related building hardware; - door closing devices. NOTE 2 Manually operated doors with door closing devices are not power operated doors. - integral fanlights; - adjacent parts that are contained within a single frame for inclusion in a single aperture. Products covered by this European standard are not assessed for structural applications. This European standard does not apply to: - industrial, commercial and garage doors and gates according to EN 13241-1; - external pedestrian doorsets according to EN 14351-1; - door leaves placed on the market separately; - door frames placed on the market separately; - power operated pedestrian doorsets according to EN 16361. The noise emission of power operated interior hinged doors is not considered to be a relevant hazard; therefore this standard does not contain any specific requirements to noise.

Project ID : 00051690/0001 **Draft for public enquiry**
ICS :
National Ref : SRPS H.C8.993:2015
Title : Standard Practice for Determining Volatile Organic Compound (VOC)Content of Paints and Related Coatings
Scope : This practice measures the volatile organic compound (VOC) content of solventborne and waterborne paints and related coatings as determined from the quantity of material released from a sample under specified bake conditions and subtracting exempt volatile compounds and water if present. This practice provides a guide to the selection of appropriate ASTM test methods for the determination of VOC content. Certain organic compounds that may be released under the specified bake conditions are not counted toward coating VOC content because they do not participate appreciably in atmospheric photochemical reactions. Such negligibly photochemically reactive compounds are referred to, as exempt volatile compounds in this practice. VOC content is calculated as a function of (1) the volume of coating less water and exempt volatile compounds, and (2) the volume of coating solids, and (3) the weight of coating solids.

ICS : 71.040.50
National Ref : SRPS H.C8.994:2015
Title : Standard Test Method for Determination of the Weight Percent Individual Volatile Organic Compounds Waterborne Air-Dry Coatings by Gas Chromatography
Scope : This test method is for the determination of the weight percent of individual volatile organic compounds in waterborne air-dry coatings (Note 1).
This method can be used to determine the weight percent organic content of waterborne coatings in which the volatile organic compound weight percent is below 5 percent. The method has been used successfully with higher content waterborne coatings and with solventborne coatings (Note 2).
This method may also be used to measure the exempt volatile organic compound content (for example, acetone, methyl acetate, t-butyl acetate and p-chlorobezotrifluoride) of waterborne and solvent-borne coatings. The methodology is virtually identical to that used in Test Method D6133 which, as written, is specific for only exempt volatile compounds. Volatile compounds that are present at the 0.005 weight percent level (50 ppm) or greater can be determined. A procedure for doing so is given in Section 9.

Volatile organic compound content of a coating can be calculated using data from Test Method D6886 but requires other data (see Appendix X2).

Title : Agricultural and forestry machinery. Ride-on self-propelled work equipment. Deployment principles and assessment of automatically deployed roll over protective structures

Scope : This standard establishes the minimum requirements for the design as well as the deployment assessment and testing of Automatically Deployed Roll Over Protective Structures (AD-ROPS) from its retracted position to its fully extended position in any ride-on self-propelled work equipment eligible for incorporating an automatic roll over protective structure. This standard provides neither the assessment nor the testing of the structure in the extended position for which the standard and/or testing codes listed in the normative references will apply. This standard does not apply to:- hazards associated with on-road transport - free fall events - rollover as a result of impact collisions

Title : Disc springs –Quality specifications –Dimensions

Scope : This standard specifies the set of requirements that ensure the correct functioning of disc springs. These include requirements relating to the materials and manufacturing process, tolerances on dimensions and spring forces, and also the permissible relaxation and fatigue life of such springs as a function of stress. All requirements specified here are minimum requirements. This standard covers three dimensional series of disc springs.

Title : Standard Specification for Leaded Aviation Gasolines
Scope : This specification covers purchases of aviation gasoline under contract and is intended primarily for use by purchasing agencies. This specification does not include all gasoline satisfactory for reciprocating aviation engines, but rather, defines the following specific types of aviation gasoline for civil use: Grade 80; Grade 91; Grade 100; and Grade 100LL. The gasoline shall adhere to octane rating requirements specified for individual grades, as follows: lean mixture knock value; rich mixture knock value (octane and performance number); tetraethyl lead content; color; and dye content (blue, yellow, red, and orange). Conversely, the gasoline shall meet the following requirements specified for all grades: density; distillation (initial and final boiling points, fuel evaporated, evaporated temperatures); recovery, residue, and loss volume; vapor pressure; freezing point; sulfur content; net heat of combustion; copper strip corrosion; oxidation stability; volume change during water reaction; and electrical conductivity.

Title : Standard Specification for Biodiesel Fuel Blend Stock (B100) for Middle Distillate Fuels
Scope : This specification covers biodiesel fuel blend stock, B100, in Grades S15 and S500 for use as a

blend component with middle distillate fuels. This specification prescribes the required properties of diesel fuels at the time and place of delivery. The requirements stated here may be applied at other points in the production and distribution system when provided by agreement between the purchaser and the supplier. The biodiesel specified shall be mono-alkyl esters of long chain fatty acids derived from vegetable oils and animal fats. The product shall undergo chemical analysis for flash point, methanol, water and sediment, kinematic viscosity, sulfated ash, oxidation stability, sulfur, copper strip corrosion, cetane number, cloud point, acid number, carbon residue, total and free glycerin, phosphorus, reduce pressure distillation temperature, atmospheric equivalent temperature, combined calcium and magnesium, and combined sodium and magnesium.

Title : Standard Guide for Microbial Contamination in Fuels and Fuel Systems

Scope : This guide provides personnel who have a limited microbiological background with an understanding of the symptoms, occurrence, and consequences of chronic microbial contamination. The guide also suggests means for detection and control of microbial contamination in fuels and fuel systems. This guide applies primarily to gasoline, aviation, boiler, industrial gas turbine, diesel, marine, furnace fuels and blend stocks (see Specifications D396, D910, D975, D1655, D2069, D2880, D3699, D4814, D6227, and D6751), and fuel systems. However, the principles discussed herein also apply generally to crude oil and all liquid petroleum fuels. ASTM Manual 472 provides a more detailed treatment of the concepts introduced in this guide; it also provides a compilation of all of the standards referenced herein that are not found in the Annual Book of ASTM Standards, Section Five on Petroleum Products and Lubricants. This guide is not a compilation of all of the concepts and terminology used by microbiologists, but it does provide a general understanding of microbial fuel contamination. The values stated in SI units are to be regarded as standard. No other units of measurement are included in this standard. This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.

ICS :

National Ref : SRPS B.H8.131:2015

Title : Standard Test Method for Kinematic Viscosity of Transparent and Opaque Liquids (and Calculation of Dynamic Viscosity)

Scope : This test method specifies a procedure for the determination of the kinematic viscosity, ν , of

liquid petroleum products, both transparent and opaque, by measuring the time for a volume of liquid to flow under gravity through a calibrated glass capillary viscometer. The dynamic viscosity, η , can be obtained by multiplying the kinematic viscosity, ν , by the density, ρ , of the liquid. NOTE 1: For the measurement of the kinematic viscosity and viscosity of bitumens, see also Test Methods D2170 and D2171. NOTE 2: ISO 3104 corresponds to Test Method D445–03. 1.2 The result obtained from this test method is dependent upon the behavior of the sample and is intended for application to liquids for which primarily the shear stress and shear rates are proportional (Newtonian flow behavior). If, however, the viscosity varies significantly with the rate of shear, different results may be obtained from viscometers of different capillary diameters. The procedure and precision values for residual fuel oils, which under some conditions exhibit non-Newtonian behavior, have been included. The range of kinematic viscosities covered by this test method is from 0.2 mm²/s to 300 000 mm²/s (see Table A1.1) at all temperatures (see 6.3 and 6.4). The precision has only been determined for those materials, kinematic viscosity ranges and temperatures as shown in the footnotes to the precision section. 1.4 The values stated in SI units are to be regarded as standard. The SI unit used in this test method for kinematic viscosity is mm²/s, and the SI unit used in this test method for dynamic viscosity is mPa•s. For user reference, 1 mm²/s = 10⁻⁶ m²/s = 1 cSt and 1 mPa•s = 1 cP = 0.001 Pa•s. 1.5

ICS :	75.160.20		
National Ref :	SRPS B.H8.136:2015		
Title :	Standard Test Method for Motor Octane Number of Spark-Ignition Engine Fuel		
Scope :	This laboratory test method covers the quantitative determination of the knock rating of liquid spark-ignition engine fuel in terms of Motor octane number, including fuels that contain up to 25 % v/v of ethanol. However, this test method may not be applicable to fuel and fuel components that are primarily oxygenates. The sample fuel is tested in a standardized single cylinder, four-stroke cycle, variable compression ratio, carbureted, CFR engine run in accordance with a defined set of operating conditions. The octane number scale is defined by the volumetric composition of primary reference fuel blends. The sample fuel knock intensity is compared to that of one or more primary reference fuel blends. The octane number of the primary reference fuel blend that matches the knock intensity of the sample fuel establishes the Motor octane number. The octane number scale covers the range from 0 to 120 octane number, but this test method has a working range from 40 to 120 octane number. Typical commercial fuels produced for automotive spark-ignition engines rate in the 80 to 90 Motor octane number range. Typical commercial fuels produced for aviation spark-ignition engines rate in the 98 to 102 Motor octane number range. Testing of gasoline blend stocks or other process stream materials can produce ratings at various levels throughout the Motor octane number range. The values of operating conditions are stated in SI units and are considered standard. The values in parentheses are the historical inch-pounds units. The standardized CFR engine measurements continue to be in inch-pound units only because of the extensive and expensive tooling that has been created for this equipment.

Title : Standard Test Method for Supercharge Rating of Spark-Ignition Aviation Gasoline

Scope : This laboratory test method covers the quantitative determination of supercharge ratings of spark-ignition aviation gasoline. The sample fuel is tested using a standardized single cylinder, four-stroke cycle, indirect injected, liquid cooled, CFR engine run in accordance with a defined set of operating conditions. The supercharge rating is calculated by linear interpolation of the knock limited power of the sample compared to the knock limited power of bracketing reference fuel blends. The rating scale covers the range from 85 octane

number to Isooctane + 6.0 mL TEL/U.S. gal. The values of operating conditions are stated in SI units and are considered standard. The values in parentheses are the historical inch-pound units. The standardized CFR engine measurements and reference fuel concentrations continue to be in historical units.

National Ref : ÖNORM S 5051
Title : Special specifications for the determination of sound power of cooling towers
Scope : This ÖNORM is applicable on wet and dry cooling towers in natural ventilation construction method or with auxiliary ventilation by fans as well as on cooling tower systems, which are composed of individual cells to large-scale units to apply. This standard creates together with ÖNORM EN ISO 3746 and ÖNORM EN ISO 3744 the prerequisite for the determination of noises (noise emissions) that are directly emitted from cooling towers to the surrounding air, so that the results can be determined and that the results are comparable.

Title : Smart cities. Smart energy supply and services management in ports

Scope : The purpose of this document is to define the minimum requirements for a port in relation to: 1. Management Systems supplies and services required in berths. 2. The communication platforms port-city. This document is applicable to all categories of smart ports or ports within the smart city or smart town.

Title : Smart cities. KPIs for characterization, monitoring and improvement of urban logistics or last mile distribution

Scope : This standard establishes and defines KPI's (Key Performance Indicator, KPI) for characterization, monitoring and improving urban last mile logistics and distribution, from the viewpoint of reducing the impact of the activity, energy efficiency and reduced cost. These key performance indicators are used both by the government and by logistics operators, carriers, in order to have a real diagnosis of the situation of urban freight distribution, keep track of your progress, set goals for improvement, measure impacts of the implementation of optimization strategies, efficient management, or any other policy of improving on activity.
