Mr. Rudolf Periny, CEO

eyecoon offers the full cycle of development, customization and integration services of enterprise information management systems, including analysis, architecture creation, prototyping and configuration as well as information technology consulting.

Through **eyecoon**'s expertise and industry knowledge, our solutions are optimized to work seamlessly with hardware and software from different vendors and provide end-to-end content management tools to meet a variety of business requirements.

Digital Signage Solution

Retailers and other merchants who want to influence customers in increasingly diverse environments need more than just a content delivery and playback solution. They need a complete solution that integrates seamlessly with their IT environments while providing hierarchical management authority and interactive content creation capabilities. Our solution is an economical, web-based solution that is optimized for the near-seamless management of digital signage hardware and software.

The solution offers a fully immersive content capability and it is an excellent option for displaying complex content when visual impact is most important.

Our Smart Signage Platform technologies can help businesses reduce hardware costs by eliminating the need for an additional PC or media player.

Hospitality Solution

Hotels and resorts must keep pace with patrons' expectations for in-room entertainment. With social, gaming and other Internet applications now accessible on larger displays, businesses can take advantage of this trend to delight patrons with new services. Already common in many venues, in-room TV access to guest services, information and checkout helps boost patron satisfaction and encourage return visits.

Therefore, eyecoon has developed a content management solution which enables property managers to effectively manage content over an IP-based infrastructure without additional STBs or maintenance costs and deliver information about their facilities by using an intuitive UI and editing tool to simply organize and display customized content, such as hotel information or images, over existing infrastructure.
